

LEGATO FILING CABINET

Legato® is a fully featured cabinet that has been designed to provide practical and reliable storage to make the most of your office space.

Legato cabinets feature a 2-stage ball bearing runner design that operates smoothly even when fully loaded. Drawers can be completely extended for access to all files, and can easily be removed if required for relocation. A drawer lock-out mechanism allows single drawer access and prevents cabinets from tilting. A full height zincseal drawer body design fully supports files and prevents documents from falling into the cabinet.

PVC strips fitted to the drawer sides allow ease of file movement.

AESTHETICS

Legato drawers feature a dished finger grip section with a full width handle and card holder for ease of operation and file location.

A fully seam welded top and slimline carcass construction without exposed assembly fittings ensure a high quality exterior finish.

STRENGTH

The Legato's runner assembly features a standard drawer lock-out mechanism and has been load tested in excess of 50,000 cycles with a 30kg load for maximum durability.
