Roller Forks

Type RFC Roller Forks

Perfect for container loading, Roller Forks allow for products such as bulk bags, cartons, and other bagged products to be transported and loaded using slip sheets, eliminating the use of pallets. Able to be fitted easily to most forklifts, with no additional hydraulics required. Simply replace the existing fork tines on the truck with the Roller Forks.

Fitted with an ingenious roller design, these forks simply roll under the slip sheet. Once the goods are lifted, the rollers are retracted, ensuring the load is securely positioned.
