

Cages and Loading Ramp Cages

Truck and Isotainer Fall Prevention Cages with Walk Surface

The Carbis truck and isotainer fall protection cage with walk surface was designed to help increase safety while loading / unloading vehicles such as trucks and isotainers. These types of vehicles have potential tripping and falling hazards due to their curved tanks and raised access hatches. The flat slip-resistant floor panels provide a level secure surface for personnel to stand.

Helping to create a safer working environment while accessing trucks and isotainers

Sometimes the best fall protection solutions are the simplest
