

Track Mounted Gangways

Safer, more efficient access to multiple vehicles and hatches

The Carbis Track Mounted Gangway allows the unit to move (track) along the side of the loading platform, allowing virtually unlimited access to one or multiple vehicles/hatches.

The tracking gangway helps increase safety by eliminating spotting problems.

If a vehicle is mis-spotted, does personnel reposition the truck/rail car, or do they simply work around the problem by using the fall prevention equipment incorrectly? Our tracking system eliminates this safety problem.

Benefits

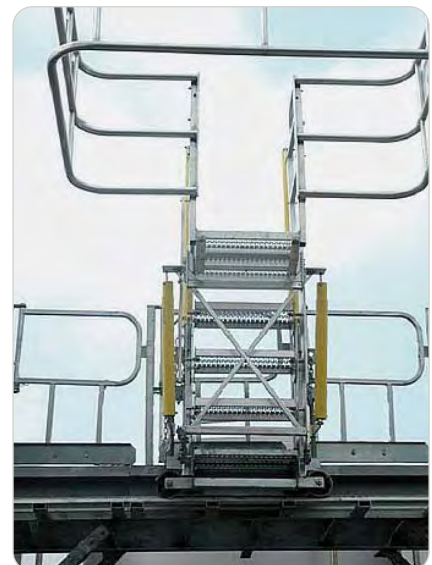

- Allows access to multiple hatch trailers and multiple vehicles from a single platform, eliminating the need to re-spot trucks, saving time and money
- Can be retrofitted to an existing loading rack

Designed to meet your
specific needs

How it Works

The truck or rail car is positioned anywhere alongside the loading platform. The gangway is then rolled along the track to where the vehicle is parked.

This system is perfect for accessing multiple hatches on a truck or multiple rail cars.

The track mounted gangway rolls on a unique wheel and track system, allowing the gangway to be moved effortlessly.
