THE ULTIMATE RETURNABLE - FOLDING CRATE

This family of crates has been created for ultimate shipping and storage.

Rigid when loaded and stacked, these crates quickly fold inwards when empty. This design sets a new standard for stacking strength in a reusable collapsible container.

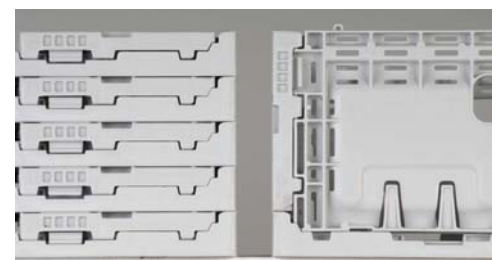

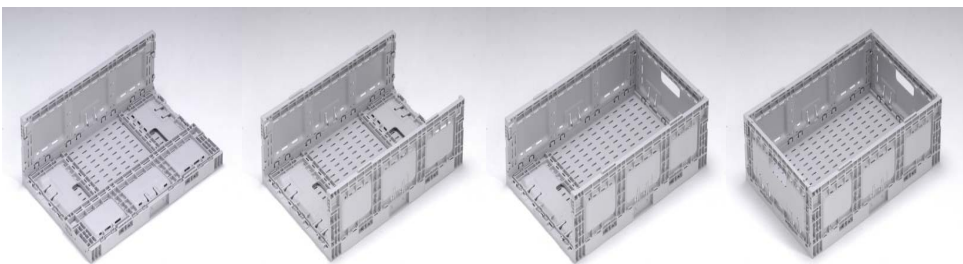

This family of plastic crates allows businesses to drop the old cardboard habit and become sophisticated in your supply chain solutions.

RFC Available in four different heights, these crates can be used for any type of product or material handling application. Each crate has the same footprint folded or loaded thereby conserving valuable storage space.

These returnable totes are ergonomically designed for manual operations, easy to assemble and disassemble and work equally well in fully automated systems.

Picture shows non standard colour
 Standard colour is Light Grey

Product Features
