1. PALDISC

Illustrated
 # PF0009-with ramp edge

- Paldisc is designed specifically for loading with hand pallet trucks. It's low height of only 22mm is the lowest of any turntable on the market yet it is rated to two tonnes and makes rotation of loads easy and safe.

Applications for PALDISC & PALRING

- Manual palletising or depalletising.
- Loading or unloading of stillages, containers, bins, bags, bricks, tiles.
- Can be purchased for use on lift tables or other platforms as rotational aids.
- Commonly used alongside conveyor, feeding hoppers, extruders, process and production equipment.

2. PALRING

- Palring is a tough, affordable turntable with 2 tonne capacity that won't bind or tighten under load. Easy to use, galvanised and available in 900mm or 1100mm diameter models.

3. PALIFT

- Pallet Levellers resemble scissor lift tables in appearance. They have a top deck and a base connected by a pair of scissor legs. The levelling mechanism is a set of springs and is set to the weight and height (the density) of the product. From then on the levellers work automatically and raise or lower as the weight changes. This load setting is a simple process and for most users springs never have to be changed. A shock absorber is used to prevent any bounce and all Australian Palifts are supplied with a standard galvanised finish.

Applications

- Manual palletising or depalletising.
- Loading or unloading of stillages, containers, bins, bags, bricks, tiles.
- Commonly used alongside conveyor, feeding hoppers, extruders, process and production equipment.

Options

- Available in stainless steel, as a mobile unit for easy relocation, or as a tandem unit.

Safety

- Palift is extremely safe to use as it does not require any motor or power source.

Limitations

- Fork lift or walkie stacker availability is essential to allow the pallet or container to be loaded/unloaded on the palift.
- Levellers are not active lifting products and only move the load in response to changing weight.

Code	Description	Trade Price Exc GST
