

Personal Protection Equipment and Spill Kit Accessories

The first rule in responding to a spill is "Don't waste time". Time wasted finding the correct response equipment can lead to expensive and time consuming problems.

Our signage ensures equipment is rapidly located and deployed.

Including the correct PPE in each of your Spill Kits reduces further delay.

PCB testing kits allow you to properly identify used oils before disposal.

Spill Station® are able to customise your Spill Control Kit because we proudly manufacture each Kit right here in Australia
