SPILL STATION TRAINING

SPILL STATION AUSTRALIA IS 100% AUSTRALIAN OWNED

HYDROCARBONS (OIL/FUEL)

This absorbent meets EPA requirements and is able to absorb many times its own weight. Because this absorbent collects oil/fuel and repels water, it is ideal for all weather conditions on land or water. All Spill Stations contain instructions, and training packages are available for all products.

SPILL STATIONS SPILL RESPONSE KITS

TSS 240W Oil/Fuel Spill Station

The TSS 240W is packaged in a 240L mobile bin and contains over 13m of booms in varying lengths, 150 absorbent pads, waste bags, ties and signage. This kit can deal with spills of hydrocarbons up to 400L. Ideal for use in maintenance and refueling areas.

TSS 20 Oil/Fuel Spill Station

With over 2500 units sold, this compact Spill Station has application in many areas, especially where storage space is scarce. In the transport industry, in kitchens and in laboratories, the TSS 20 facilitates the removal of up to 20L of oils and hydrocarbon-based spills. A mounting bracket is available for attachment to workshop wall, truck, forklift or other machinery.

TSS 120W Oil/Fuel Spill Station

The TSS 120W contains over 5m of oil/fuel booms, 100 half-size pads, waste bags, ties and signage packaged in a 120L mobile bin. It is designed for spills of 150L and is valuable emergency equipment in areas where drums of 200L are used or stored.

TSS 120CB Oil/Fuel Spill Station

Containing the same amount of booms pads and waste bags as the 120W, the TSS 120CB is packed in a high visibility PVC bag. Because this Spill Station is so compact and portable, it is ideal for the transport industry and work in the field.

TSS 50 Oil/Fuel Spill Station

The TSS 50 contains disposal bags, oilproof gloves, signage, 2.4m of boom and 50 half-size absorbent pads. This Spill Station is best deployed in work areas where spills of up to 50L may be a risk.

TSS 20SB Oil/Fuel Spill Station

Packed in a velcro-poly bag, this lightweight Spill Station is designed for storage in narrow places, e.g. truck cabin, car boot. The TSS 20SB can contain spills up to 20L but, like the rest of the Spill Station range, can be upsized when dealing with larger volumes.

ABSORBENTS

Spill Station Oil Fuel Absorbent Pads

Oil/Fuel Absorbent Pads are manufactured in light and heavy grades. They can absorb up to 15 times their weight in oils, fuels, fats and solvents, and are useful during machinery or vehicle maintenance. Pads can be purchased in bulk packs, in wall mountable dispenser packs and they comprise part of every Spill Station kit.

Oil/Fuel Floating Booms

Spill Station Australia manufacture floating oil absorbent booms in varying lengths and diameters. These booms are used to contain and absorb oil/fuel spills on water and will continue to float when saturated with oil.

Spill Station Oil/Fuel Absorbent Blanket Rolls

When preparing an effective response to larger spills, these oil/fuel blankets are the most economical option. They can be cut to size or rolled out over large areas, such as shorelines, for rapid deployment. Blanket Rolls are available in a variety of sizes and weights.

Oil/Fuel Absorbent Drain Bag

This product, as with all Spill Station oil/fuel absorbents, will repel water even when soaked with hydrocarbons. Simply tie the Drain Bag to the grate and drop it into the sump. Absorbs up to 12L.
