

DEM-TRUCK Versatile Equipment Trolley

Ideal for demonstration, servicing and distribution purposes

The Demtruk was originally designed for moving heavy, expensive or awkward to lift photocopiers in and out of vehicles and into offices for demonstration purposes.

The Demtruk is now used for transferring many other pieces of expensive or delicate equipment where lifting in and out of vehicles could cause back strain to the employee, expensive damage to the equipment or where more than one person would be required (eg. coffee machine, Poker machines and large and heavy books).

BENEFITS

- Health and safety for the employee - avoiding back strain injury
- Single person operation – saving duplicate staffing
- Easy manoeuvrability and positive braking on both back wheels
- Height adjustable - suitable for the majority of vans, estate cars and MPV's
- Two versions - suiting light weight or heavier weight equipment being moved
- Three sizes of pallet – choice depending on size of the equipment

DemTruk folding and collapsible trolleys were designed from the ground up to help you easily load, unload and transport equipment such as medical equipment, copiers, office equipment, beverage equipment and more. The DemTruk allows one person to do the job of several.

Loading and unloading is easy due to the DemTruk's adjustable heights. Because the DemTruk equipment trolley is collapsible, folding the DemTruk down to store right next to your equipment during travel just takes a few seconds.

There are two versions of the base unit, the lightweight, for loads up to 155kg and the standard for loads up to 220kg. The standard is also available with pneumatic rear tyres.

Illustrated Pneumatic wheel style

Part Number	Description	Weight (kg) Gross/Net	
DEMTRUCK BASE ONLY			
# KE381/00 S	Standard Demtruck BASE ONLY	22 / 19.5

DEM-TRUCK Versatile Equipment Trolley

HOW IT WORKS

DemTruk - Easy to Manoeuvre

The operator is shown pushing the load to her vehicle. The rubber tyres give her equipment a smooth ride over rough surfaces.

DemTruk at Variable Heights

At the highest loading height of all the sport utility vehicles, she effortlessly rolls the platform off the undercarriage into the vehicle.

DemTruk - Easily Adjusted

She then lowers the platform supports into a folding position by simply flipping a latch on each side and sliding the supports in a downward position.

DemTruk Carts are Time Savers

After folding the side supports downward and pulling the side walls together, she is then ready to place the undercarriage into the vehicle. The four step folding procedure can take less than five seconds to complete.

DemTruk - Easy to Handle

In the folded position, the lightweight, 13 kilos, compact undercarriage is lifted by its convenient handle and placed next to the loaded platform.

DemTruk - Just Makes Sense

The compactness of the undercarriage allows extra storage room in your vehicle for other items. The undercarriage folds to only 20cm wide by 31cm high and 92cm long. The standard unit is 26cm wide when folded.
