

Specialty Ute & Canopy Roof Rack Systems

Rhino-Rack ute and canopy systems can be customised to suit varying floor pan profiles and cabin heights. The high quality structural aluminium ute post uprights can easily be cut to match an existing roof bar over the cabin. This system incorporates Heavy Duty Rhino-Rack crossbars, enabling the user to customise the system with the full range of Rhino-Rack accessories. Utility uprights are available in several lengths, check with your authorised dealer to ensure correct upright and crossbar specifications.

The RTRL adapter is the answer to attaching a guttermount leg to all Rhino standard Track Mount systems.

Made from stainless steel, the RTRL offers you a flexible and universal mounting system to suit all Rhino standard tracks. The RTRL lets you level all 3 bars on a vehicle fitted with a canopy by utilising the different heights available in our existing Rhino guttermount leg range and mounting them into tracks on the vehicle cabin.

It is recommended that your load not be secured rigidly to all 3 bars because of vehicle independent movement between cab and tray.

Fixed Mount

For lighter load situations where utility posts are not required. Our Fixed Mount can be placed on the canopy roof with the GE backing plate sandwiching the canopy, giving additional support. Legs are available in 50mm and 80mm height.

GE Backing Plate

Used in conjunction with our canopy fixed mount. This product covers up the mounting hardware on the underside of the canopy.

Artificial Gutters

When carrying those light type loads, the application and use of an artificial gutter will allow the use of traditional roof rack crossbars. Requires drilling and bolting of the plates to the side of the canopy.

Cabin Mount

The Cabin Mount is fixed to the roof and provides the platform for any height Rhino Heavy Duty gutter mount leg to be attached to it. This is the ideal solution for cabin bars that need to match high roof canopies. *Part# RFMRL*

Canopy Track Mount

Tracks are mounted to the canopy, hard top tonneau and hard top resin roofs. Crossbars can be adjusted along the tracks to accommodate your various loads. Legs are available in 50mm and 80mm height. RLCP and RSP style legs can only be used with this system.

Canopy Rack Systems

The bent canopy posts transfer the load directly to the utility bed floor and are braced to the side to give further support. The one piece uprights protrude through the canopy roof and can be adjusted to suit cabin bar heights. Rock solid, well braced and practical in their design and function.

Bent uprights follow the profile of the vehicle allowing maximum payload space within the canopy.

Aero Bar Adapter Kit

Available for adapting our Rhino Heavy Duty Aero Bar to Rhino Canopy upright posts.
