Heavy Duty Double Ladder Rack

- All slides are manufactured from high impact wear resistant materials.
- All components supplied are anti-corrosive.
- Multi-slide system can be customised to fit different ladder sizes.
- The slides allow ladders to be loaded and unloaded with minimal effort from the rear of the vehicle.

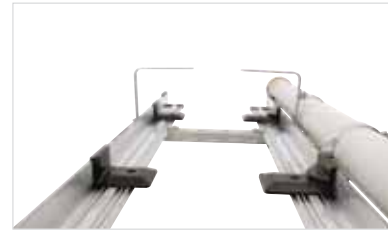

Since its inception Rhino-Rack has made specialty ladder rack systems a major part of its range. With stringent union regulations and tough OH&S guidelines, companies such as Telstra, Optus and various electrical service companies and their contractors have requested specialty ladder rack systems that make the loading and unloading of ladders as simple and easy as possible. Rhino-Rack has developed this requirement to a stage now where the product is world class.

As OH&S issues are becoming more predominant worldwide, Rhino-Rack is now positioned to offer its products and expertise globally. These specialty ladder rack systems have been designed to fit a large range of tradesman and 4x4 vehicles, including vans, wagons, utilities and service body vehicles. They have undergone rigorous laboratory crash tests and have been put to the test in Australia's adverse and extreme outback road conditions.

Ladder Hoops

Two piece height adjustable ladder hoop attached to rails to allow for most ladder sizes.

Ladder Slides

Low friction polypropylene slides have easy adjustable positioning to suit various length ladders.

Conduit Cap

Crash tested, ribbed conduit end cap. Supplied with secure wire trace for easier operation.

Bull Nose Slides

Rear slides allow effortless ladder loading.

Cable Lock

Attaches to Ladder Rail or underneath crossbar. (Ladder rail mount shown)
