Modular Aluminium Hand Trucks

Magliner Aluminium hand trucks weight as little as 8kg, but have an effective capacity of 225kg.

Light weight means less operator strain, **fewer injuries** and **greater productivity**.

Lightweight hand trucks are easier to lift on and off delivery trucks and easier to move around in confined spaces.

It's a better value.

Magliner aluminium hand trucks match steel load for load. They're just as strong so you can carry as much, or more, per load. They last longer and cost you less money in the long run. Our modular design lets you customize your own hand truck so they're better matched to the job. Repair costs are slashed. And aluminium never rusts.

It's easier to use.

We've designed our aluminium hand trucks around your needs. Because they're lighter than steel, Magliner trucks make tough handling jobs easier. You get better efficiency and more productivity. Injury-related losses like disability time and worker's compensation decline.

Two frame styles for flat and curved loads

Straight back frames are ideal for boxes and cartons.

- Curved back frames carry cylindrical objects like drums and kegs safely and easily.
