Allweld Step Ladder

Optional extras and safety features available

Wall Mounting Brackets can be purchased to allow the folding platforms to be folded and hung for storage.

HD castors - lever action

A Lever Castor System operates the seven and eight step platform ladders and this gives far greater stability than spring loaded castors on these large units. The lever system is also available for the six step platforms on request. The lever castor system is simply operated by the operators' foot but still allows the platform ladder to be folded for storage.

Hand Rails

An alternative to the safety gate are the yellow powder coated Optional Handrails. These fit all models and simply bolt on.

Safety Gate - Open

This fully encloses the operator whilst on the platform, satisfying work places with OHW&S. Contractors requiring a transportable platform ladder with a safety gate choose the Allweld Platform Ladder because it can still be folded up, even when the safety gate is fitted.

Loading Tray are available with a load capacity of 5kg. The tray simply clicks on or off the platform ladder's tummy rail - All models

LD castors - spring action

Optional Spring Loaded Castors are available for the two, three, four, five and six step models. A spring automatically disengages the castor when the operator mounts and automatically engages when the operator dismounts the ladder.

Part Number	Description	Platform	Weight (kg)	Footprint (mm)	Trade exc. GST
# HDC-FPS	HD castors - lever operated suits FPS21 & FPS24				
# LDC-FSP	LD Castors - automatic spring activated suits FPS06 - FPS18				
# LTR-FPS	Loading tray - 5kg load rating				
# OHR-FPS	Optional hand rails - note: all models have existing grab rails				
# SGA-FPS	Safety gate				
# WMB-FSP	Wall mounting bracket
