

Ultra Modular IBC SpillPallets®

Low-Cost Spill Containment for Multiple IBC Tanks

- Indoor and Outdoor Models available for 2, 3, 4 or 5 tanks.
- Each IBC tank sits on a low-profile spillpallet with a containment capacity of 283 litres — Expansion Tanks provide 246 litres of additional capacity.
- 100% polyethylene construction — eliminates the potential for rust and corrosion.

Part# 1126 —
 3-Tank Indoor Model
 (shown in "L" shaped
 configuration)

- Meets SPCC and EPA Container Storage Regulation 40 CFR 264.175.
- Outdoor models help meet new Stormwater Management Regulations — NPDES, 40 CFR 122.26 (1999).

- "Flow-through" bulkhead fittings connect spill pallets and Expansion Tanks together, allowing spills to be channeled throughout the containment system — containment capacity is thereby "borrowed" from adjacent spill pallets and Expansion Tanks.

Pallet to Pallet connection

Pallet to Expansion Tank connection

NEW!

Part# 1127 —
 4-Tank Indoor Model

Part# 1166 — 3-Tank Outdoor Model

OUTDOOR MODEL FEATURES:

- Unique “roll top” enclosures and swing-out doors allow convenient loading and unloading of IBC tanks.
- Compartments are lockable for secure storage of hazardous materials.
- Optional Extender Kits (Part# 9658) provide for the addition of another compartment. (Holds 1 IBC tank per Extender Kit).

ULTRA-MODULAR IBC SPILLPALLETS							Components Included (Qty)
