

Selective Pallet Racking

Features and Benefits

Our selective pallet racking is the most common storage system for palletised goods.

- Allows for each pallet to be located and moved individually without moving others (100% Accessibility)
- Custom sizes are available upon request
- Compatible with most types of handling equipment
- Frames are constructed from roll formed steel providing strength and rigidity
- Custom designed spring steel beam clips used to lock beams into place to prevent accidental dislodgement
- We use roll formed double crimped box beams. It is an optimal design and is manufactured from high tensile steel that minimises twists and provides excellent resistance to frontal impact damage
- Particle board and mesh decks are available to create shelf levels in the rack
